

1 **ABSTRACT OF THE DISCLOSURE**

2 A storage stand has multiple shelves, split tubular sleeves, brackets and
3 vertical supports. Each shelf has multiple corners and each bracket is mounted
4 at one of the corners under the shelves to hold a split tubular sleeve by welding.
5 The vertical supports are mounted between adjacent shelves. Since the welds
6 are hidden under each shelf, the storage stand has an aesthetic appearance and
7 can be easily assembly.
